Cory, Charles Barnor
List of the birds of
eastern North America/

PREFACE.

IN the following list special reference is made to species which occur in New England, Illinois, and Florida. Taking these States to form the points of an imaginary triangle, a somewhat crude idea of the range of species which occur within this area may be obtained, as it is evident that birds which occur in Illinois, New England, and Florida must, in all probability, also occur in most of the intermediate States; whereas those which are recorded from only one of these localities would probably be species which only touched within the limits of this area during their migrations, or birds of comparatively local distribution. Of course, a number of the species do not occur in either New England, Illinois, or Florida, as the list includes all birds which are known to occur in North America east of the ninetieth meridian.

CHARLES B. CORY.
